Next Review Date: 2008 GEARING. 25X1A CENTRAL INTELLIGENCE GROUP INTELLIGENCE REPORT DATE: COUNTRY Germany (Russian Zone) 25X1X INFO. Current Work at Gema, Berlin, Expected to End SUBJECT 10 April 1947 DIST. in Mid-March; Letter from Gema Personnel in **PAGES** Moscow 25X1X SUPPLEMENT DISTRIBUTION KKITX JUSTICE NAVY WAR SOURCE Current work at the Gema plant in Berlin-Köpenick, now operating as SMA Technical Bureau No. 11, and at the SMA Schraubenfabrik in Berlin-Oberschöneweide, is expected to end about the middle of March. 25X1X the Schrauberfabrik was engaged in the development of high frequency tubes, with more than 100 German workers employed under the supervision of three or four Russian officers using civilian cover. 25X1X two new technical bursaus were established by the Russians. Personnel, some speaking Russian and some German, were hired to evaluate drawings from Siemens, EFEM, AEG, and Gema; they were instructed to select those which might be of future use and to make copies of material analyses and component formulas. The two bureaus are located at Rodelbergweg 6 in Berlin-Baumschulenberg and Bismarckstrasse 18, Berlin-Oberschöneweide. A letter received from former chief engineer Blasig of Gema, now in Moscow, indicated that Gema's department for gyro equipment and controls is located in the latter city. The letter states that specialists are being treated well, but that necessary technical equipment is lacking. Factories are planning experimental assembly line production of equipment developed by Gema. The letter intimates that the Germans are closely guarded at all times and that their dependents are confined to residence compounds.
